## NEWS RELEASE

September 16, 2011

### RT MINERALS (TSX.V - RTM) ANNOUNCES DRILL RESULTS AND PROPERTY UPDATES

RT Minerals Corp. (TSX.V: RTM) (the “Company” / “RTM”) announces an update on the deep hole on the Meunier property drilling down plunge from Lake Shore Gold Corp.’s (TSX: LSG) Timmins Mine and Rusk zone, West Timmins gold camp, Ontario. In addition, RTM announces assay results for seven holes from RTM’s 100% owned Bazooka gold property, located approximately 7km south of Noranda, Quebec. The first four holes (BRT-11-01 to 04) of the current 14 hole program at Bazooka were previously announced on June 21, 2011 and remain as stated following full metallicity analysis.

*Assay Results Received For RT Minerals 2011 Drilling — Bazooka Property*

Hole No.	Section	Zone		From (m)	To (m)	Interval (m)	Au g/t
BRT-11-01	2225E	Bazooka Main		174.33	176.07	1.74	5.11
			Including	174.33	175.00	0.67	7.92
				227.50	255.00	27.50	0.68
			Including	234.88	235.30	0.42	12.48
			And	250.00	253.70	3.70	2.04
			Including	252.82	253.70	0.88	7.49
BRT-11-02	2225E	Bazooka Main		35.60	42.85	7.25	1.01
			Including	36.30	37.00	0.70	1.58
			And	38.45	39.40	0.95	2.54
			And	40.85	42.20	1.35	2.04
				56.00	57.54	1.54	1.81
				71.50	72.50	1.00	2.26
BRT-11-03	1980E	Bazooka Main		138.00	145.92	7.92	1.20
			Including	142.28	144.95	2.67	2.04
			Including	143.15	144.09	0.94	3.14
BRT-11-04	1978E	Bazooka Main		119.00	136.00	17.00	7.86
			Including	124.80	132.00	7.20	16.77
			Including	125.13	126.00	0.87	100.48
			And	130.10	130.73	0.63	35.16
BRT-11-05	2195E	Bazooka Main		122.04	123.90	1.86	29.43
			Including	122.04	122.75	0.71	76.64
			Including	122.26	122.75	0.49	110.24
				167.38	169.00	1.62	1.18

Hole No.	Section	Zone		From (m)	To (m)	Interval (m)	Au g/t
				187.33	192.00	4.67	0.80
BRT-11-06	2170E	Bazooka Main		73.80	74.35	0.55	3.53
				125.48	126.36	0.88	1.88
				130.83	133.47	2.64	6.12
			Including	130.83	131.60	0.77	17.76
				156.50	157.50	1.00	2.42
				170.00	177.00	7.00	0.86
			Including	173.50	174.00	0.50	5.91
BRT-11-07	2000E	Bazooka Main	NSV				
BRT-11-08	1980E	Bazooka Main		106.62	107.33	0.71	5.62
				121.80	130.68	8.88	4.67
			Including	121.80	125.00	3.20	12.49
			Including	121.80	122.54	0.74	12.38
			And	124.34	125.00	0.66	43.78
BRT-11-09	2000E	Bazooka Main		154.20	154.85	0.65	0.93
				159.98	161.00	1.02	2.09
				167.00	168.00	1.00	4.18
				170.00	171.00	1.00	2.09
BRT-11-10	1234E	Bazooka Main		263.00	265.00	2.00	0.42
BRT-11-11	1865E	Bazooka Main		146.65	155.40	8.75	0.77
				153.50	155.40	1.90	1.57
			Including	154.20	154.80	0.60	3.05
				177.95	180.00	2.05	13.97
			Including	177.95	178.19	0.24	117.42

The intervals reported in the table above represent core lengths. The true width is presently approximated at about 85 to 95% of core lengths based on the dip of the rock formations and mineralized corridor. It is possible that the widths could be somewhat different due to the structural complexity (folding and shearing) in the Cadillac-Larder Lake Deformation Zone.

The above drill hole results are fire assays completed by Swastika Laboratories of Kirkland Lake, Ontario as to holes BRT-11-01 to 06. Holes BRT-11-07 to 11 are fire assays completed by Laboratoire Expert of Noranda, Quebec.

The Bazooka property lies 7 km south of Rouyn-Noranda, Quebec in Beauchastel Twp. The Cadillac-Larder Break strikes across the Bazooka property which is also adjacent to and on strike from the Augmitto, Cinderella and Astoria gold deposits controlled by Yourbeau Resources Inc. (TSX.V). The main focus of drilling has been in the east central part of the property in close proximity to a major flexure of the Cadillac deformation zone and near past development on mineralization from underground by previous operators.

Between 2003-2005 Lake Shore Gold Corp. (TSX: "LSG") conducted 10,804 meters of drilling on the Bazooka property yielding numerous significant intersections including 2.0m of 11.7 g/t, 1.0m of 316.2 g/t, 2.3m of 10.8 g/t, 3.0m of 5.0 g/t and 1.3m of 94.1 g/t Au. This drilling increased the known strike length of the zone from 250m to 560m and the zone remains open to the west and to depth on the RTM property. The above RTM drilling outlined in the above table has further confirmed this mineralized trend.

The mineralization at the Bazooka property is greenstone-hosted quartz-carbonate vein lode mineralization. The Main Zone at Bazooka hosts gold bearing quartz-carbonate veins in a carbonate-talc chlorite schist unit along the Cadillac-Larder Lake Fault ("CLLF"). The CLLF is characterized by a 2 to 3m wide, strong graphitic fault at the base widening up to 60m of talc-chlorite and quartz-carbonate-sericite altered schist. The best gold mineralization occurs within the 20 to 60m wide alteration/deformation zones and are confined to a 2 to 10m wide, strongly silicified-carbonatized rock with grey or brownish quartz veins. The entire zone is commonly anomalous in gold over a 52m width. Mineralization occurs in both sedimentary and ultramafic units. Gold mineralization is associated with arsenopyrite, chalcopyrite, pyrite and visible gold.

### **MCWATTERS GOLD PROPERTY, QUEBEC**

RTM also owns 100% of the McWatters gold property located about 10km east of Bazooka and adjacent to holdings of Yourbeau Resources Inc., Gold Bullion Development Corporation Inc. (TSX.V) and ThreeGold Resources Inc. (TSX.V). RTM has now completed linecutting, a magnetometer survey and a surface soil sampling program with results pending. In addition, trenching at McWatters has commenced and is ongoing on the historic Lac Bruyere gold showing.

### **MEUNIER JV OPTION, DEEP DRILLING, WEST TIMMINS, ONTARIO**

The current initial deep drill hole on the Meunier JV property is ongoing and when completed is estimated to provide a deep cut on the projected target area at an approximate vertical depth of 2400m. This will enable a series of shallower wedge cuts to obtain further details on shape and extent of major geological structures as well as potential mineralization. The initial deep hole was collared on LSG's Timmins Mine property in August 2010 and is now about 2600m in core length and with recent wedging appears to be on track to potentially hit the intended target by late October 2011.

This hole is targeting potential zones down plunge and on strike to mineralization at LSG's 100% owned Timmins Mine gold deposit where LSG has previously announced intercepts of up to 13.55 g/t Au over 50.80m and 61.35 g/t Au over 15m (LSG - August 10, 2010 News Release) and where LSG has announced further drilling results relating to their Thunder Creek project, Rusk Zone, of up to 75.14 g/t Au over 18.60m (LSG - March 4, 2011 News Release).

The Timmins Mine deposit straddles a volcanic/sedimentary/ultramafic contact zone, within a folded sequence that plunges about 54 degrees to the west-northwest towards the RTM - Adventure Gold Inc. (TSX.V) Meunier JV Property in which RTM has now earned a 12.5% interest (LSG 12.5%) and RTM may earn up to a 25% interest and LSG may earn a 25% interest. LSG may also earn a further 7.5% in the Meunier JV Property by carrying out an Economic Assessment Study on the property within the next 10 years. In addition, LSG currently owns 27.2% of the current issued and outstanding share capital of RTM.

LSG's Timmins Mine ore body has demonstrated vertical persistence as it can be traced down-plunge for a distance of approximately 1500m from surface, and remains open at depth. Newly emerging and significant fold structures and complexities are now becoming apparent on the deepest sections of the Timmins Mine from LSG drilling. Overall, the gross geometry of the structure has remained consistent from surface to a 1300m vertical depth and it is apparent that this geometry and structure continues to depth toward and potentially onto the Meunier JV Property.

## **QUALITY CONTROL**

Mr. Robert Laakso, P.Eng., is the Independent Qualified Person who has prepared or supervised the preparation of the information that forms the basis for the scientific and technical disclosure in this news release.

## ***Forward-Looking Statements***

Certain statements in this press release relating to the Company's exploration activities, potential for increasing resources, project expenditures and business plans are "forward-looking statements" within the meaning of securities legislation. The Company does not intend, and does not assume any obligation, to update these forward-looking statements. These forward looking statements represent management's best judgment based on current facts and assumptions that management considers reasonable, including that operating and capital plans will not be disrupted by issues such as mechanical failure, unavailability of parts, labor disturbances, interruption in transportation or utilities, or adverse weather conditions, that there are no material unanticipated variations in budgeted costs, that contractors will complete projects according to schedule, and that actual mineralization on properties will not be less than identified mineral reserves. The Company makes no representation that reasonable business people in possession of the same information would reach the same conclusions. Forward looking statements involve known and unknown risks, uncertainties and other factors which may cause the actual results, performance or achievements of the Company to be materially different from any future results, performance or achievements expressed or implied by the forward-looking statements. In particular, fluctuations in the price of gold or in currency markets could prevent the Company from achieving its targets. Readers should not place undue reliance on forward-looking statements. More information about risks and uncertainties affecting the Company and its business is available in Lake Shore Gold's most recent Annual Information Form and other regulatory filings which are posted on SEDAR at [www.sedar.com](http://www.sedar.com). There is no guarantee that drill results reported in this news release will lead to the identification of a deposit that can be mined economically, and further work is required to identify resources and reserves. The maps attached hereto are location summary maps and as a result of electronic reproduction may not be exactly to scale. The Meunier JV map, Timmins, Ontario, outlines projected or conceptual zones potentially extending from known gold zones on LSG properties. These potential extensions of LSG zones onto the Meunier JV ground has yet to be tested by current drilling, and their existence on the AGE-RTM-LSG JV property has not yet been confirmed. We seek safe harbour.
